

Requirements

Functional Requirements

1. Social Travel Feed

1.1 - Users shall be able to view trending travel destinations.

- System shall calculate trending destinations based on the number of visits.
- System shall display destination name, image, visit count.

1.2 - Users shall be able to search for and connect with other users.

- System shall support search by name or username.
- System shall allow sending friend requests.
- System shall display friend requests and enable users to accept/decline requests.

1.3 - Users shall be able to view profiles of their friends.

- System shall display number of trips, number of countries/cities visited, number of friends, number of reviews.
- System shall show recent activities of the friend (trips, reviews).

1.4 - Users shall be able to view recent travel activities of their friends.

- System shall display a feed of recently visited places and recently added reviews from all friends.
-

2. Place Discovery & Rating

2.1 - Users shall be able to search for travel destinations.

- System shall initially display popular places.
- System shall support search by location name.
- System shall display for each of the search results: location picture, name, rating, number of visits.

2.2 - Users shall be able to view more information about a destination.

- System shall display an overview with destination description, images, tags, and number of friends that visited.
- System shall display destination reviews and ratings with the person who posted and date.
- System shall allow users to sort reviews by newest, highest, or lowest rating.

2.3 - Users shall be able to rate and review destinations they have visited.

- System shall allow ratings (1-5 stars), text reviews, images.
- System shall support tagging (e.g, "budget", "family-friendly").

2.4 - Users shall be able to filter destinations.

- System shall support filters such as popularity and tags.
- System shall allow combining multiple filters.

2.5 - Users shall be able to save destinations to a wishlist.

- System shall allow adding/removing destinations from wishlist.
-

3. Travel Profile

3.1 - Users shall be able to view their personal profile and statistics.

- System shall display number of friends and number of total trips.

3.2 - Users shall be able to edit their personal profile.

- System shall allow updating username, password, profile picture.
- System shall validate unique username.

3.3 - Users shall be able to access their wishlist.

- System shall display number of wishlist items.
- System shall display options to view the wishlist.

3.3 - Users shall be able to access their reviews.

- System shall display number of reviews.
- System shall allow users to access their reviews.
- System shall allow users to sort their reviews by recency or rating.

3.4 - Users shall be able to view a list of their friends.

- System shall display top travel companions (friends most often travelled with).
- System shall display a list of all friends.
- System shall allow searching for friends.
- System shall allow removing friends.

3.5 - Users shall be able to view notification history.

- System shall store notifications for at least 6 months.
-

4. Travel History

4.1 - Users shall be able to view a map of visited places.

- System shall display pins for visited locations.

4.2 - Users shall be able to view personal travel statistics.

- System shall calculate number of countries and cities visited, number of places rated, group trips count.

4.3 - Users shall be able to view past and recent trips.

- System shall display a timeline with trip dates, destinations, pictures, and participants.
 - System shall display most recent trips.
 - System shall display an option for showing all trips.
-

5. Group Trip Planning

5.1 - Users shall be able to create and manage travel groups.

- System shall allow group creation with name and optional description.
- System shall allow viewing groups with active voting with information like admin, members, and voting options.
- System shall allow viewing groups for upcoming trips and past groups with information like members, date, and itinerary.
- System shall define roles: admin (group creator), member.

5.2 - Users shall be able to invite friends to groups.

- System shall support adding friends to groups.
- System shall allow leaving a group that the user doesn't want to be part of.

5.3 - Users shall be able to communicate in groups.

- System shall support messaging in a group chat.

5.4 - Users shall be able to collaboratively build an itinerary after voting is complete.

- System shall allow adding/removing/editing activities.
 - System shall display a day by day itinerary of activities with activity names and hours/time of day.
 - System shall track who added each item.
-

6. Voting System

6.1 - Users shall be able to vote on proposed destinations.

- System shall display voting options with number of votes and people who voted for each choice.
- System shall support voting within a deadline.
- System shall support changing the vote within the deadline.

6.2 - Users shall be able to vote on dates and budget.

- System shall allow selecting from available dates.
- System shall allow selecting from available budget ranges.

6.3 - Users shall be able to propose voting options.

- System shall allow proposing a new destination.
- System shall allow selecting a new date range from a calendar view.
- System shall allow providing a budget range.

6.4 - Admins shall be able to resolve conflicts and finalize decisions.

- System shall generate overlapping availability visualization.
 - System shall detect conflicts (budget/date/destination mismatch).
 - System shall allow manual override by admin.
-

7. General

7.1 - Users shall be able to create accounts and login.

- System shall allow users to create an account by providing their name, username, email, and password.
- System shall allow users to login using their email/username and password.
- System shall allow users to recover their account if they forget the password.

7.2 - Users shall receive system notifications.

- System shall notify users about friend requests, voting updates, trip updates, chat messages.

7.3 - Users shall receive AI recommendations.

- System shall generate destination and itinerary suggestions.
